## Shamrock Colin Caustic Soda O'Kelly

Chemwatch Hazard Alert Code: 4

Issue Date: **15/01/2021** Print Date: **27/04/2022** S.GHS.AUS.EN

# Safety Data Sheet according to WHS Regulations (Hazardous Chemicals) Amendment 2020 and ADG requirements SECTION 1 Identification of the substance / mixture and of the company / undertaking

## **Product Identifier**

Version No: 12.1

Product name	Shamrock Colin Caustic Soda
Chemical Name	sodium hydroxide
Synonyms	NaOH; soda lye; white caustic soda; caustic soda, anhydrous; sodium hydroxide monohydrate (CAS RN: 12200-64-5); lye; sodium hydroxide solid pellets pearl flakes alkali; caustic soda - pearl solid grades 30167; PPG Pels Caustic Soda Beads; Spectrum S1303 S1302 S1303 S1305 S1308 SO170; Caustic Flake; sodium hydroxide granulated; sodium hydroxide; sodium hydroxide, flake, technical; sodium hydroxide, pellets, UNILAB; sodium hydroxide pellets GPR
Proper shipping name	SODIUM HYDROXIDE, SOLID
Chemical formula	H2O.HNaOINaOH
Other means of identification	Not Available
CAS number	1310-73-2

## Relevant identified uses of the substance or mixture and uses advised against

Relevant identified uses	Component of alkali cleaners. Manufacture of soap, pulp and paper; rayon. Chemical manufacture. Neutralising agent in petroleum refining;
nelevant lucitilieu uses	manufacture of aluminium, detergents, textile processing, refining of vegetable oils.

## Details of the supplier of the safety data sheet

Registered company name	O'Kelly
Address	6-24 Monash Drive Dandenong South Vic 3175
Telephone	+61 3 9797 6161
Fax	+61 3 9797 6162
Website	http://www.okelly.co
Email	info@okelly.co

#### Emergency telephone number

Association / Organisation	POISON CENTRE
Emergency telephone numbers	13 11 26
Other emergency telephone numbers	Not Available

Once connected and if the message is not in your prefered language then please dial 01

## **SECTION 2 Hazards identification**

## Classification of the substance or mixture

Poisons Schedule	S6
Classification [1]	Skin Corrosion/Irritation Category 1A, Serious Eye Damage/Eye Irritation Category 1
Legend:	1. Classified by Chernwatch; 2. Classification drawn from HCIS; 3. Classification drawn from Regulation (EU) No 1272/2008 - Annex VI

## Label elements

Continue flushing until advised to stop by the Poisons Transport to hospital or doctor without delay. Removal of contact cocurs: Immediately flush body and clothes with large amount: Quickly remove all contaminated clothing, including for Wash skin and hair with running water. Continue flushi Transport to hospital, or doctor. If fumes or combustion products are inhaled remove fr Lay patient down. Keep warm and rested.	Name         sodium hydroxida         rawn from Regulation (EU) No 1272/2008 - Annex VI; 4. Classification drawn from C&L         nuously with running water.         ds apart and away from eye and moving the eyelids by occasionally lifting the upper         Information Centre or a doctor, or for at least 15 minutes.         only be undertaken by skilled personnel.         s of water, using safety shower if available.         otwear.         ing with water until advised to stop by the Poisons Information Centre.

- Inhalation of vapours or aerosols (mists, fumes) may cause lung oedema. Inhalation
  - Corrosive substances may cause lung damage (e.g. lung oedema, fluid in the lungs). + As this reaction may be delayed up to 24 hours after exposure, affected individuals need complete rest (preferably in semi-recumbent posture) and must be kept under medical observation even if no symptoms are (yet) manifested.
  - Before any such manifestation, the administration of a spray containing a dexamethasone derivative or beclomethasone derivative may be considered.

## This must definitely be left to a doctor or person authorised by him/her.

(ICSC13719)

- ▶ For advice, contact a Poisons Information Centre or a doctor at once.
- Urgent hospital treatment is likely to be needed.
- If swallowed do NOT induce vomiting.

Melbourne:

Ph: (03) 9797 6161

- Ingestion
  - F If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to maintain open airway and prevent aspiration. Observe the patient carefully.

O'Kelly: Packaging Beyond Expectations

## Page **3** of **10**

## Shamrock Colin Caustic Soda

- Never give liquid to a person showing signs of being sleepy or with reduced awareness; i.e. becoming unconscious.
- Give water to rinse out mouth, then provide liquid slowly and as much as casualty can comfortably drink.
- Transport to hospital or doctor without delay.

## Indication of any immediate medical attention and special treatment needed

For acute or short-term repeated exposures to highly alkaline materials:

▶ Respiratory stress is uncommon but present occasionally because of soft tissue edema.

- Unless endotracheal intubation can be accomplished under direct vision, cricothyroidotomy or tracheotomy may be necessary.
- Oxygen is given as indicated.
- ▶ The presence of shock suggests perforation and mandates an intravenous line and fluid administration.
- Damage due to alkaline corrosives occurs by liquefaction necrosis whereby the saponification of fats and solubilisation of proteins allow deep penetration into the tissue.

Alkalis continue to cause damage after exposure.

INGESTION:

Milk and water are the preferred diluents

- No more than 2 glasses of water should be given to an adult.
- ▶ Neutralising agents should never be given since exothermic heat reaction may compound injury.
- \* Catharsis and emesis are absolutely contra-indicated.

\* Activated charcoal does not absorb alkali.

\* Gastric lavage should not be used.

Supportive care involves the following:

- Withhold oral feedings initially.
- If endoscopy confirms transmucosal injury start steroids only within the first 48 hours.
- Carefully evaluate the amount of tissue necrosis before assessing the need for surgical intervention.

Patients should be instructed to seek medical attention whenever they develop difficulty in swallowing (dysphagia).

SKIN AND EYE:

Injury should be irrigated for 20-30 minutes.

Eye injuries require saline. [Ellenhorn & Barceloux: Medical Toxicology]

## **SECTION 5 Firefighting measures**

#### Extinguishing media

- Water spray or fog.
- Foam.
- Dry chemical powder.
- BCF (where regulations permit).

## Special hazards arising from the substrate or mixture

Fire Incompatibility None known.

#### Advice for firefighters

Fire Fighting	<ul> <li>Alert Fire Brigade and tell them location and nature of hazard.</li> <li>Wear full body protective clothing with breathing apparatus.</li> <li>Prevent, by any means available, spillage from entering drains or water course.</li> <li>Use fire fighting procedures suitable for surrounding area.</li> </ul>
Fire/Explosion Hazard	<ul> <li>Solid in contact with water or moisture reacts violently, and solutions are highly alkaline and may cause severe skin burns.</li> <li>Non combustible.</li> <li>Not considered a significant fire risk, however containers may burn.</li> <li>Decomposition may produce toxic fumes of: metal oxides</li> <li>May emit corrosive fumes.</li> </ul>
HAZCHEM	2W

## **SECTION 6 Accidental release measures**

## Personal precautions, protective equipment and emergency procedures

See section 8

## **Environmental precautions**

See section 12

## Methods and material for containment and cleaning up

Minor Spills	<ul> <li>Remove all ignition sources.</li> <li>Clean up all spills immediately.</li> <li>Avoid contact with skin and eyes.</li> <li>Control personal contact with the substance, by using protective equipment.</li> <li>Drains for storage or use areas should have retention basins for pH adjustments and dilution of spills before discharge or disposal of material.</li> <li>Check regularly for spills and leaks.</li> </ul>
Major Spills	<ul> <li>Clear area of personnel and move upwind.</li> <li>Alert Fire Brigade and tell them location and nature of hazard.</li> <li>Wear full body protective clothing with breathing apparatus.</li> <li>Prevent, by any means available, spillage from entering drains or water course.</li> </ul>

Personal Protective Equipment advice is contained in Section 8 of the SDS.

Melbourne:

Ph: (03) 9797 6161

## **SECTION 7 Handling and storage**

Precautions for safe handling	
O'Kelly:	

Packaging Beyond Expectations

www.okelly.co

Safe handling	<ul> <li>Avoid all personal contact, including inhalation.</li> <li>Wear protective clothing when risk of exposure occurs.</li> <li>Use in a well-ventilated area.</li> <li>WARNING: To avoid violent reaction, ALWAYS add material to water and NEVER water to material.</li> </ul>
Other information	<ul> <li>Plastic bag</li> <li>NOTE: Bags should be stacked, blocked, interlocked, and limited in height so that they are stable and secure against sliding or collapse.</li> <li>Store in original containers.</li> <li>Keep containers securely sealed.</li> <li>Store in a cool, dry, well-ventilated area.</li> <li>Store away from incompatible materials and foodstuff containers.</li> <li>DO NOT store near acids, or oxidising agents</li> <li>No smoking, naked lights, heat or ignition sources.</li> </ul>

## Conditions for safe storage, including any incompatibilities

Suitable container	<ul> <li>Glass container is suitable for laboratory quantities</li> <li>DO NOT use aluminium, galvanised or tin-plated containers</li> <li>Lined metal can, lined metal pail/ can.</li> <li>Plastic pail.</li> <li>Polyliner drum.</li> <li>Packing as recommended by manufacturer.</li> <li>For low viscosity materials</li> <li>Drums and jerricans must be of the non-removable head type.</li> <li>Where a can is to be used as an inner package, the can must have a screwed enclosure.</li> <li>For materials with a viscosity of at least 2680 cSt. (23 deg. C) and solids (between 15 C deg. and 40 deg C.):</li> <li>Removable head packaging;</li> <li>Cans with friction closures and</li> <li>low pressure tubes and cartridges</li> <li>may be used.</li> </ul>
Storage incompatibility	<ul> <li>Sodium hydroxide/ potassium hydroxide:</li> <li>reacts with water evolving heat and corrosive furmes</li> <li>reacts with water evolving heat and corrosive furmes</li> <li>reacts violently with acids, trans-acetylene dichloride, aminotetrazole, p-bis(1,3-dibromoethyl), benzene, bromoform, halogenated compounds, nitrogen-containing compounds, organic halogens, chlorine dioxide ((explodes), chloroform, cresols, cyclopentadiene, 4-chloro-2-methylphenol, cis-dichloroethylene, 2,2-dichloro-3,3-dimethylbutane, ethylene chlorohydrin, germanium, iodine pentafluoride, maleic anhydride, p-nitroshloroh, phosphonium indide, potassium peroxodisultate, proylene oxide, 1,2,4,5-tetrachlorobenzene (highly toxic substance is forme), 2,2,3,3-tetrafluoro-1-propanol, tetrahydrofuran, thorium dicarbide, trichloroethanol, 2,4,6-trinitrotoluene, introal kanes, (forming explosive compounds)</li> <li>incompatible with acetic acid, acetaldehyde, acetic anhydride, acrolein, acrylonitrile, allyl chloride, organic anhydride, acrylates, alcohols, aldehydes, alkylene oxides, substituted allyls, ammonium chloroplatinate, beraanthrone, bromine, benzene-1,4-diol, carbon dioxide, cellulose nitrate, chlorine trifluoride, 4-chlorobydryonitrile, chloronhydrin, chloronhydrin, chloronhydrin, chloronhydrin, entirates pentol, phenol, solution, chlorocresols, 1,2-dichloroethylene, epichlorohydrin, ethylene cyanohydrin, formaldehyde (forms formic acid, antamaldehyde, caprolactam solution, chlorocresols, 1,2-dichloroethylene, hydrogen sulfide, hydrogenne, iron-silicon, isocyanates, ketones, methyl azide, 4-methyl-2-nitrophenol, imicral acids (forming corresponding satt), nitrobenzene, N-nitrosohydroxylamine, nitrates pentol, phenols, phosphorus pentaoxide, beta-propiolactone, sodium, sulfur dioxide, tetrahydroborate, 1,1,1,2-tetrachloroethane, 2,2,2-tritichloroethylene (troms sitte)-ento-1, -ny-1-o, N,N-bis(2,2,2-trinitroethyl)ure, at and reacts explosively with a mixture of chloroform and methane</li> <li>forms heat-, friction-, and/ or shock-sen</li></ul>

## SECTION 8 Exposure controls / personal protection

## **Control parameters**

INGREDIENT DATA									
Source	Ingredient	Material name		TWA		STEL		Peak	Notes
Australia Exposure Standards	sodium hydroxide	Sodium hydroxide		Not Available		Not Available		2 mg/m3	Not Available
Emergency Limits									
Ingredient	TEEL-1		TEEL-2				TEEL	-3	
sodium hydroxide	Not Available		Not Availa	able			Not Av	vailable	
Ingredient	Original IDLH				Revise	d IDLH			
sodium hydroxide	10 mg/m3				Not Ava	ailable			

## Exposure controls

Appropriate engineering controls If conditions where worker exposure potential is high, wear full-face air-supplied breat Engineering controls are used to remove a hazard or place a barrier between the wo be highly effective in protecting workers and will typically be independent of worker in The basic types of engineering controls are: Process controls which involve changing the way a job activity or process is done to	rker and the hazard. Well-designed engineering controls can nteractions to provide this high level of protection.
--	--

Brisbane: Ph: (07) 3889 6682

Melbourne: P Ph: (03) 9797 6161 P

Perth: Ph: (08) 9494 1740

Continued...

	Enclosure and/or isolation of emission source which keeps a selected hazard "physically" away from the worker and ventilation that strategically "adds" and "removes" air in the work environment.
Personal protection	
Eye and face protection	<ul> <li>Safety glasses with unperforated side shields may be used where continuous eye protection is desirable, as in laboratories; spectacles are not sufficient where complete eye protection is needed such as when handling bulk-quantities, where there is a danger of splashing, or if the material may be under pressure.</li> <li>Chemical goggles.whenever there is a danger of the material coming in contact with the eyes; goggles must be properly fitted.</li> <li>Full face shield (20 cm, 8 in minimum) may be required for supplementary but never for primary protection of eyes; these afford face protection.</li> <li>Alternatively a gas mask may replace splash goggles and face shields.</li> </ul>
Skin protection	See Hand protection below
Hands/feet protection	<ul> <li>Elbow length PVC gloves</li> <li>The selection of suitable gloves does not only depend on the material, but also on further marks of quality which vary from manufacturer to manufacturer. Where the chemical is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.</li> <li>The exact break through time for substances has to be obtained from the manufacturer of the protective gloves and has to be observed when making a final choice.</li> <li>Personal hygiene is a key element of effective hand care.</li> </ul>
Body protection	See Other protection below
Other protection	<ul> <li>Overalls.</li> <li>PVC Apron.</li> <li>PVC protective suit may be required if exposure severe.</li> <li>Eyewash unit.</li> </ul>

## Recommended material(s)

## GLOVE SELECTION INDEX

Glove selection is based on a modified presentation of the:

"Forsberg Clothing Performance Index".

The effect(s) of the following substance(s) are taken into account in the computergenerated selection:

Shamrock Colin Caustic Soda

Material	СРІ
BUTYL	A
NAT+NEOPR+NITRILE	А
NATURAL RUBBER	А
NATURAL+NEOPRENE	А
NEOPRENE	А
NEOPRENE/NATURAL	А
NITRILE	А
NITRILE+PVC	А
PE	А
PE/EVAL/PE	А

SARANEX-23	А
SARANEX-23 2-PLY	А
TEFLON	А
VITON/CHLOROBUTYL	А

## **Respiratory protection**

Particulate. (AS/NZS 1716 & 1715, EN 143:2000 & 149:001, ANSI Z88 or national equivalent)

Required Minimum Protection Factor	Half-Face Respirator	Full-Face Respirator	Powered Air Respirator
up to 10 x ES	P1 Air-line*	-	PAPR-P1 -
up to 50 x ES	Air-line**	P2	PAPR-P2
up to 100 x ES	-	P3	-
		Air-line*	-
100+ x ES	-	Air-line**	PAPR-P3

\* - Negative pressure demand \*\* - Continuous flow

A(All classes) = Organic vapours, B AUS or B1 = Acid gasses, B2 = Acid gas or hydrogen cyanide(HCN), B3 = Acid gas or hydrogen cyanide(HCN), E = Sulfur dioxide(SO2), G = Agricultural chemicals, K = Ammonia(NH3), Hg = Mercury, NO = Oxides of nitrogen, MB = Methyl bromide, AX = Low boiling point organic compounds(below 65 degC)

 $\cdot$  Respirators may be necessary when engineering and administrative controls do not adequately prevent exposures.

· The decision to use respiratory protection should be based on professional judgment that takes into account toxicity information, exposure measurement data, and frequency and likelihood of the worker's exposure - ensure users are not subject to high thermal loads which may result in heat stress or distress due to personal protective equipment (powered, positive flow, full face apparatus may be an option).

· Published occupational exposure limits, where they exist, will assist in determining the adequacy of the selected respiratory protection. These may be government mandated or vendor recommended.

· Certified respirators will be useful for protecting workers from inhalation of particulates when properly selected and fit tested as part of a complete respiratory protection program.

· Where protection from nuisance levels of dusts are desired, use type N95 (US) or type P1 (EN143) dust masks. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU)

· Use approved positive flow mask if significant quantities of dust becomes airborne. · Try to avoid creating dust conditions.

## **SECTION 9** Physical and chemical properties

selection must be based on detailed observation. -

\* CPI - Chemwatch Performance Index

A: Best Selection

should be consulted.

	EC50(ECx)	48h	Crustacea	34.59-47.13mg/l	4
sodium hydroxide	LC50	96h	Fish	144-267mg/l	4
	EC50	48h	Crustacea	34.59-47.13mg/l	4

Ecotoxicity: Fish LC50 (96h): 43mg/l

For Metal:

Atmospheric Fate - Metal-containing inorganic substances generally have negligible vapour pressure and are not expected to partition to air.

Environmental Fate: Environmental processes, such as oxidation, the presence of acids or bases and microbiological processes, may transform insoluble metals to more soluble ionic forms. Environmental processes may enhance bioavailability and may also be important in changing solubilities.

Aquatic/Terrestrial Fate: When released to dry soil, most metals will exhibit limited mobility and remain in the upper layer; some will leach locally into ground water and/ or surface water ecosystems when soaked by rain or melt ice. A metal ion is considered infinitely persistent because it cannot degrade further.

Prevent, by any means available, spillage from entering drains or water courses.

DO NOT discharge into sewer or waterways.

Biodegradability: Not biodegradable.

## Persistence and degradability

Ingredient	Persistence: Water/Soil	Persistence: Air
sodium hydroxide	LOW	LOW

## **Bioaccumulative potential**

Ingredient	Bioaccumulation			
sodium hydroxide	OW (LogKOW = -3.8796)			
Mobility in soil				
Ingredient	Mobility			
sodium hydroxide	LOW (KOC = 14.3)			

## **SECTION 13 Disposal considerations**

Naste treatment methods						
Product / Packaging disposal	Legislation addressing waste dis	posal requirements may differ	by country, state and/ or territor	ry. Each user must refer to laws	operating in their	
O'Kelly: Packaging Beyond Expectations	Melbourne:	Perth: Ph: (08) 9494 1740	Brisbane: Ph: (07) 3889 6682	www.okelly.co	Continued	

area. In some areas, certain wastes must be tracked.
A Hierarchy of Controls seems to be common - the user should investigate:
▶ Reduction
▶ Reuse
▶ Recycling
Disposal (if all else fails)
This material may be recycled if unused, or if it has not been contaminated so as to make it unsuitable for its intended use.
DO NOT allow wash water from cleaning or process equipment to enter drains.
It may be necessary to collect all wash water for treatment before disposal.
In all cases disposal to sewer may be subject to local laws and regulations and these should be considered first.
Where in doubt contact the responsible authority.
Recycle wherever possible.
Consult manufacturer for recycling options or consult local or regional waste management authority for disposal if no suitable treatment or disposal facility can be identified.
Treat and neutralise at an approved treatment plant.
<ul> <li>Treatment should involve: Mixing or slurrying in water; Neutralisation with suitable dilute acid followed by: burial in a land-fill specifically</li> </ul>
licensed to accept chemical and / or pharmaceutical wastes or Incineration in a licensed apparatus (after admixture with suitable combustible
incensed to accept chemical and 7 or pharmaceducal wastes or incineration in a licensed apparatus (after admixture with suitable compusuble material).

## **SECTION 14 Transport information**

## **SECTION 15 Regulatory information**

## Safety, health and environmental regulations / legislation specific for the substance or mixture

## sodium hydroxide is found on the following regulatory lists

Australia Hazardous Chemical Information System (HCIS) - Hazardous Chemicals

Australia Standard for the Uniform Scheduling of Medicines and Poisons (SUSMP) -Schedule 5

Australian Inventory of Industrial Chemicals (AIIC)

#### **National Inventory Status**

National Inventory	Status
Australia - AIIC / Australia Non-Industrial Use	Yes
Canada - DSL	Yes
Canada - NDSL	No (sodium hydroxide)
China - IECSC	Yes
Europe - EINEC / ELINCS / NLP	Yes
Japan - ENCS	Yes
Korea - KECI	Yes
New Zealand - NZIoC	Yes
Philippines - PICCS	Yes
USA - TSCA	Yes
Taiwan - TCSI	Yes
Mexico - INSQ	Yes
Vietnam - NCI	Yes
Russia - FBEPH	Yes
Legend:	Yes = All CAS declared ingredients are on the inventory No = One or more of the CAS listed ingredients are not on the inventory. These ingredients may be exempt or will require registration.

## **SECTION 16 Other information**

Revision Date	15/01/2021
Initial Date	17/06/2005

## SDS Version Summary

Version	Date of Update	Sections Updated
10.1	19/03/2014	Chronic Health, Disposal, Engineering Control, First Aid (inhaled), Supplier Information, Synonyms
12.1	15/01/2021	Toxicity and Irritation (Other)

#### Other information

Classification of the preparation and its individual components has drawn on official and authoritative sources as well as independent review by the Chemwatch Classification committee using available literature references.

The SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings. Risks may be determined by reference to Exposures Scenarios. Scale of use, frequency of use and current or available engineering controls must be considered.
